Reflection 2

#coding

This week was fun but more tedious than last week as I wanted everything to move together so that it still looked like a cookie. I also made half of the stripes move to add some more visual interest. I also used so event handling to create a little green square that can be moved around using mouse clicks which took a bit. Then we have the chatgpt sketch that had more or less vibrating chocolate chips and didn't have any visible background. Similarly to last week, the chatgpt version is much more simple which seems like it will be the trend for these versions. That being said it is always fun to see what it can come up with.
